Multi-Layered Agricultural Head Gaskets

Victor Reinz OE Form, Fit & Function makes a difference!

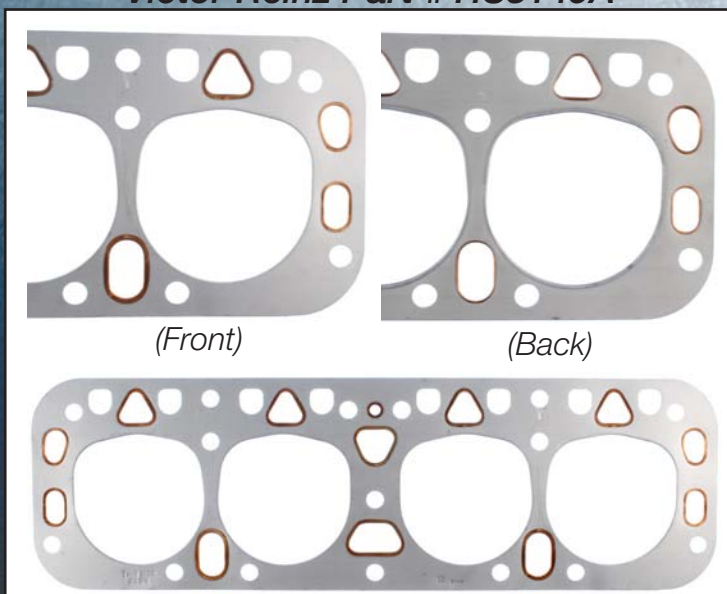

The **Victor Reinz**[®] gaskets have three layers and are the factory design which are metal clad and contain every factory grommet. Grommets increase the sealing load around the fluid and combustion openings.

Brand F has two layers; a steel layer is missing from the top. This gasket is also missing the coolant grommets, but includes the high pressure oil grommet. It is composed of a noncored sealing material which would further aggravate the high pressure oil grommet and combustion sealing load during engine operation. Without grommets, it is difficult to obtain the proper sealing load at fluid openings that are not near a bolt.

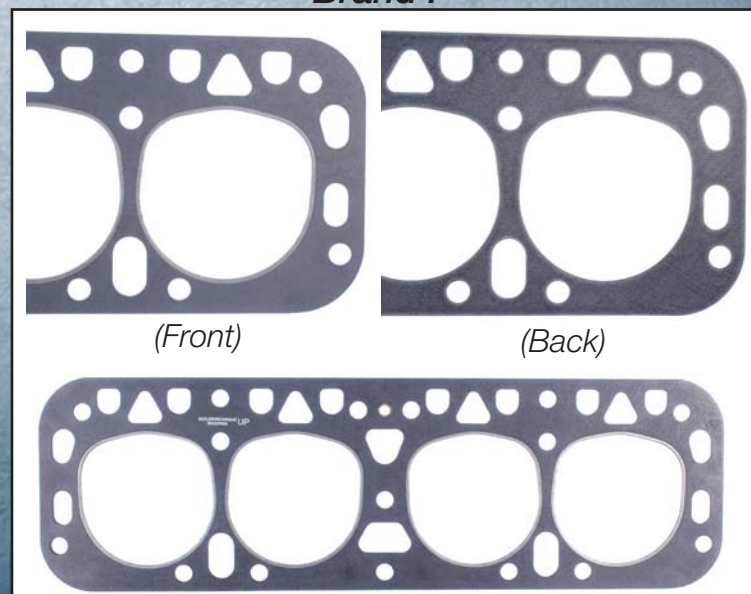

On the surface, the Victor Reinz gasket may appear more expensive, but it comes with the peace of mind that your machinery is properly sealed - **done right the first time!**
