

Hendrick Motorsports

*chooses to pay a few dollars
more for the best bearings in
the world...*

Shouldn't **YOU?**

- Seven (7) NEXTEL® Cup Championships
- 129 NEXTEL® Cup Victories
- 132 NEXTEL® Cup Poles

With talented engine builders and their investment in Clevite 77® engine bearings, the only challenge for Hendrick Motorsports is finding enough room in their trophy case.

Winning NASCAR® teams are a few of our best customers!

Clevite 77[®] TriMetal[™] Engine Bearings

are designed specifically for the unique needs of aftermarket engine rebuilders and provide the best possible combination of bearing qualities for today's engines: conformability, embedability, forgiveness and unbeatable durability. There is no better choice for the engine builder who is serious about his work and his reputation.

It takes Three Layers to be Number One.

- **Seizure Resistance** - 40% greater seizure resistance than bi-metal
- **Load Capacity** - 60% higher load capacity than bi-metal
- **Embedability & Conformability** - Third layer provides far more forgiveness than bi-metal
- **Durability** - Far exceeds OE requirements for light vehicle and heavy duty
- **Tolerance** - TriMetal bearings hold wall sizes .0002" more than bi-metal

Not all tri-metal engine bearings are the same - so if you want the strongest, highest quality engine bearings - ask for the original Clevite 77[®] TriMetal[™] Engine Bearings
